FREEZE FRAME™

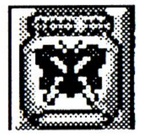
FOR WINDOWS™

FREEZE FRAME for Windows

The Perfect Complement to any Paint, Draw, or Desktop Publishing Application

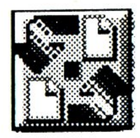
WHAT IS FREEZE FRAME?

The version of Freeze Frame included with your Boca Research Vortek adapter consists of three separate applications: Screen Capture, Viewer, and Convert. Although each application functions independently, they can all be used to enhance each other's features.



SCREEN CAPTURE allows you to capture any screen image, including menus, areas, full screens, windows, and arbitrary shapes, using a hot key or pull-down menu. It can save the image in one of four formats, to the Clipboard, or send it to the printer. By default the captured images are displayed in VIEWER.

VIEWER can display or print any graphic file which FreezeFrame supports. Multiple images can be opened at the same time so you can flip through them using quick keys. VIEWER can be accessed from within CONVERT so you can view unknown files before they are converted.



CONVERT is a conversion utility which supports conversion between dozens of different graphics file formats. Batch processing allows you to convert multiple formats at the same time.

MINIMUM SYSTEM REQUIREMENTS

To use FreezeFrame:

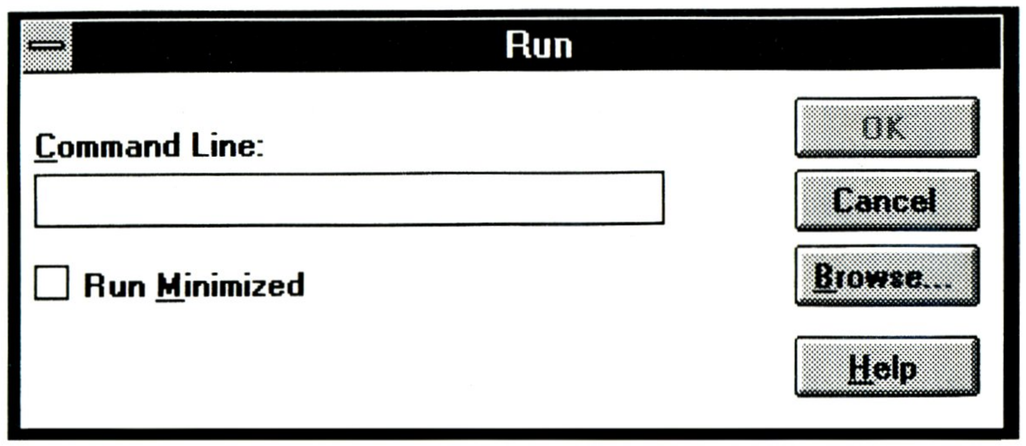
- a 286-based PC-compatible computer (386 or 486 is preferable) 2MB RAM
- 2MB hard disk space (**for this version**).
- a CGA, EGA, or VGA graphics card and monitor
- Windows 3.0 or 3.1
- DOS 4.01 or higher

How to Install Freeze Frame

1. Start Windows.

2. Insert the FreezeFrame disk into your A:\ or B:\ diskette drive.

3. Choose "Run..." from the Program Manager File menu. The Run dialog box appears.



4. Type **A:\ INSTALL** (or **B:\INSTALL**) in the Command Line Text Box.

5. Click **OK**. The message "FreezeFrame is loading. Please wait." appears.

6. A Welcome box appears. Click **CONTINUE** to continue the installation.

7. A list of available destination drives for installation appears. A number of remote logical drives will appear if you are on a network. In most cases choose C:\ (local fixed drive).

8. Enter the installation directory and either accept the default (C:\FFRAME) or enter another directory and click **OK**.

9. You are also asked to enter a program group name. Accept the default (FreezeFrame), or enter another and click **OK**.

10. FreezeFrame is now being installed. You may press **ESC** to stop the installation. You are notified if the program installed successfully or if installation failed.

NOTE: The first time you run any of the FreezeFrame applications, a dialog box appears, asking you to enter your name and company name.

Screen Capture

Capturing an image on your Windows Desktop using Screen Capture is as easy as pressing the F12 function key. You can set Screen Capture to capture a freehand, coordinate, or boxed area, a window, or an entire Desktop. The captured image is automatically displayed in Viewer. You can also select options to display the captured image in the Clipboard, send it to the printer, or to save it to one of four file formats. You even have the option of assigning a "hot key" to activate Screen Capture without leaving your current application.

Once Screen Capture is launched, you can capture an image in two different ways: choosing "Capture" from the Screen Capture System menu and selecting an image size from the cascading menu, or using a Screen Capture hot key. Both of these messages use the Screen Capture defaults to handle your captured image. Defaults can be set by choosing "Setup..." from the Screen Capture System menu.

Starting Screen Capture

To begin using Screen Capture:

1. Start Microsoft Windows 3.0 or 3.1.

2. Locate the Capture icon in the FreezeFrame program group in the Windows Program Manager.

3. Double-click on the capture icon or select the Capture icon and press **[ENTER]**. The icon defaults to the minimized icon located at the bottom of the Windows Desktop.

To bring up the Screen Capture main dialog box, either double-click on the minimized capture icon, or click on the icon once and choose "Setup..." from the Screen Capture System menu.

Setting Screen Capture Defaults

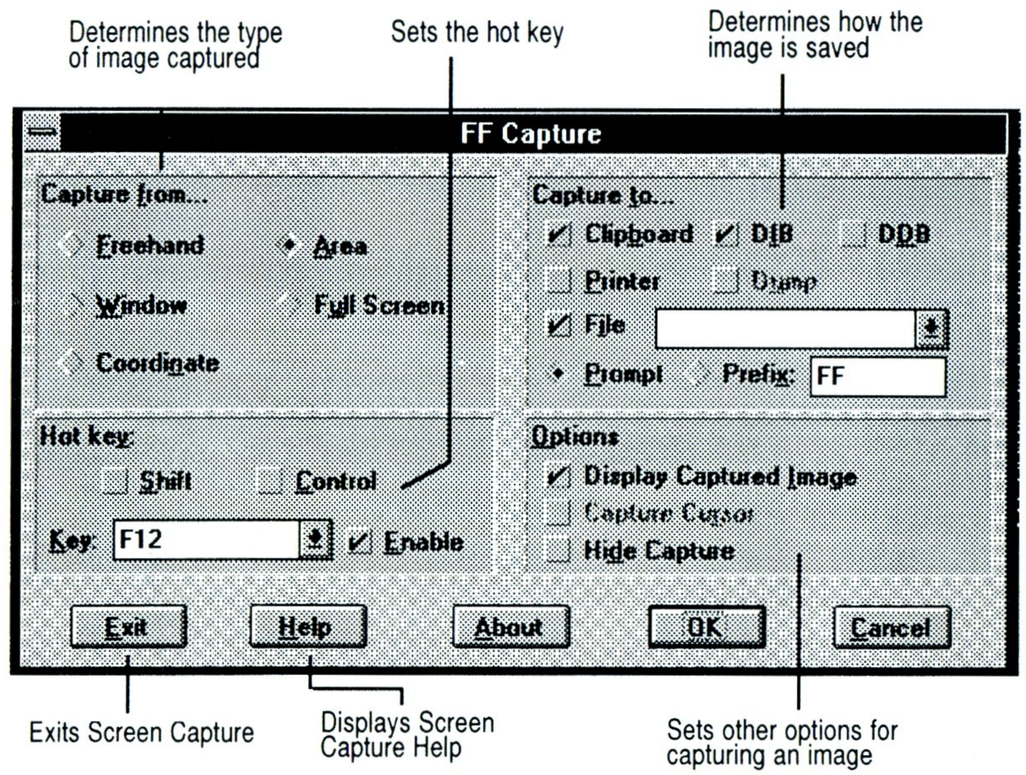
Screen Capture's main dialog box provides all control options for screen capture operations.

To set capture defaults:

1. The minimized capture icon appears at the bottom of the Window Desktop.

2. Double-click on the Capture icon once and choose "Setup..." from the Screen Capture System menu.

The following dialog box is displayed:



For additional assistance, click on **HELP**.

Viewer

Viewer is a file viewer which can be used to read and display graphics files. You can select multiple images from the "Open" dialog box and page through one image after another.

Starting Viewer

To begin using Viewer, double-click on the Viewer icon, or select "Run Program" from the Program Manager File menu. For users of alternative desktops, follow your manual's instructions for running a program.

To Start Viewer:

1. Start Microsoft Windows 3.0 or 3.1.

2. Locate the Viewer icon in the FreezeFrame program group in the Windows Program Manager.

3. Double-click on the Viewer icon or select the Viewer icon and press [ENTER]. The Viewer window appears on the Desktop.

For additional assistance, click on **HELP**.

Convert

Convert is a batch conversion utility which supports conversion between 50 different graphics file formats. It is capable of converting multiple input/output formats including numerous bitmap, vector, and fax formats. Viewer is available from within Convert so you can view unknown files before they are converted.

Starting Convert

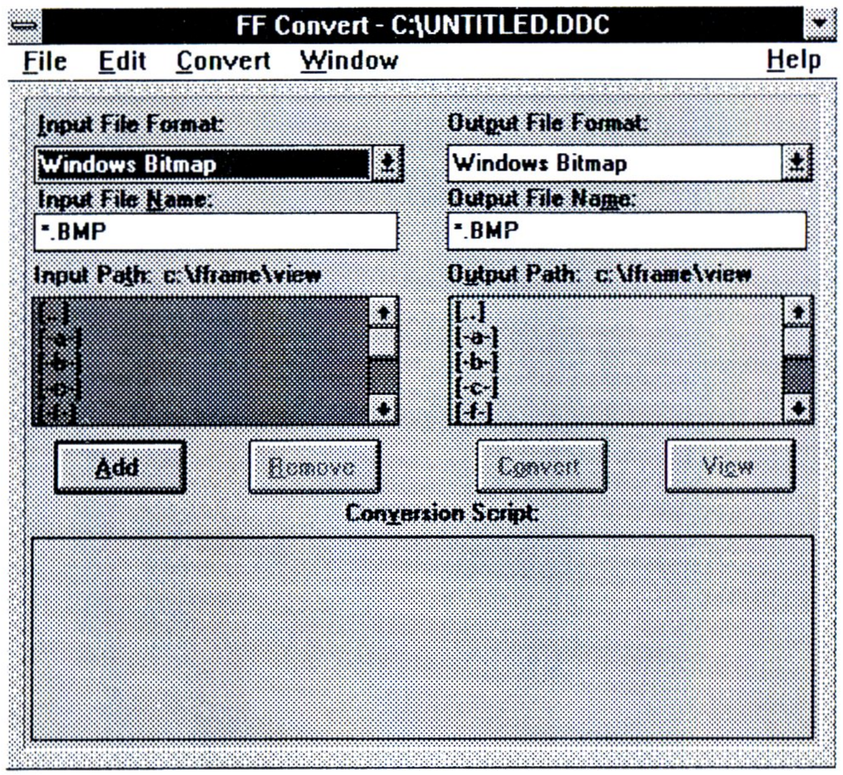
To begin using Convert. double-click on the Convert icon, or select "Run Program" from the Program Manager File menu. For users of alternative desktops, follow your manual's instructions for running a program.

To Start Convert:

1. Start Microsoft Windows 3.0 or 3.1.

2. Locate the Convert icon in the FreezeFrame program group in the Windows Program Manager.

3. Double-click on the Convert icon or select the Convert icon and press [ENTER]. The Conversion window appears on the Desktop as shown on the following page:



The Conversion window is where conversion scripts are created. You can only have one script open at one time. Scripts can be edited in the Editor from the Window menu, or by pressing F4.

For additional assistance, click on **HELP**.
